# EuroTec becomes Genesys Aerosystems dealership

Posted on [February 6, 2019](#); EuroTec Press Release

EuroTec Vertical Flight Solutions (EuroTec) has announced becoming a Genesys Aerosystems dealership for the company's wide range of rotorcraft products.

EuroTec offers complete installation services, sales and support for Genesys' HeliSAS autopilot systems along with its line of popular avionics solutions.

Recent installations include HeliSAS systems for VIP and fire/utility operators flying Airbus H125 and H130 aircraft as well as the Bell 407GXP, demonstrating EuroTec's strong background in avionics integration.

HeliSAS has become one of the most widely deployed pilot assistance systems and EuroTec avionics manager Adam Boyko has extensive experience installing and operating Genesys products.

"The HeliSAS has been a great success with our wide range of customers," said Boyko. "We have been pleased to utilize this modern system to decrease pilot workload and increase safety without a large weight penalty seen in prior autopilot systems. The team at Genesys has been great to work with and provides excellent support for their products."

EuroTec performs installations at its Kansas City area headquarters as well as its Canadian subsidiary outside Toronto, Ontario.

"Genesys Aerosystems consistently meets our clients' needs for cutting-edge solutions in avionics and autopilot options," stated EuroTec's director of sales and business development, Paul Ross. "Our team has decades of background in the most in-demand airframes, ensuring high quality installations every time."

Ross also stated that the company continues development of main ship battery kits for various helicopters utilizing TrueBlue Power's High Performance Lithium-ion batteries.
