Good evening everyone.

Please find the following update below regarding the progress of 350LH

Apical Floats:

- 1) Progress of 90%. We are awaiting a L/H FWD bag ass'y as the original unit sent to us was manufactured incorrectly from Apical. The new component will be shipped to us early next week
- 2) We are awaiting a letter of no objection and additional engineering from Apical regarding the installation of the float cable mixing box. Due to the configuration changes made to the new style 350's, we seem to be one the first to be installing this kit on the new style ships.....Apical Engineering should have more news for us next week. I will also be meeting them at the HAC show regarding these issues.
